

ASK THE ADVISORS

How do we change (for the better) with the seasons?

SEAL THE ENVELOPE

You need to check your roof

Make sure that it doesn't have anything missing or loose. Also, ensure that your roof and gutters are clear of debris.

HEAT UP HVAC

Have your HVAC professional install the best filtration possible

Ask your tech how much 'make-up' air (fresh air from outside) is being brought into the building. The more, the better.

REFLECT ON WINDOWS AND DOORS

Do they keep out the elements?

If they don't seal up well, it may be a good thing. This year is different than most in that we're looking for ways to bring fresh air into our worship spaces and buildings.

PERK UP PARKING

Does your lot need repairs?

Look at your walkways too. Are they free of trip hazards? Do you have walks that have settled or heaved?

CHECK OUT(SIDE)

Inspect your building's exterior

Look at shrubs, bushes and, even, trees. Maybe it's time to trim them back or remove them so new ones can be planted.
